## Mediterranean Swordfish and Eastern-Atlantic Bluefin tuna: recent findings on stock status

 Working Group (WG2) on pelagic fishes -ICCATICCAT Secretariat
(October 13, 2016)
ICCAT
CICTA
CICAA

## Swordfish: Background information

## Managed by International Commission for the Conservation of Atlantic Tunas

 (ICCAT):- Unique stock (limited mixing with the N. Atlantic one)
- Last assessment in July 2016 (also assessed in 2014)

- Management through input control measures (e.g. vessel list, minimum size/weight, fisheries closures)

## Objective:

- Maintain the stocks at level which will permit maximum sustainable catch for food and other purposes

## ICCAT CICTA CICAA 50

## Fisheries

- Main gears: Longlines (surface, mesopelagic) and Gillnets (prohibited since 2012)
- Production around $10,000 \mathrm{t}$ in the recent years, with a peak of 20,365 tin 1988
- Major fisheries (2003-2015): Italy (45\%), Morocco (14\%), Spain (13\%), Greece (10\%) and Tunisia (7\%)

## Catch at size

- Juveniles (<3yr old) dominate the catches (50-70\% in terms of numbers)

## ICCAT CICTA CICAA 50

## Catch at size

- No trend over the past 30 years regarding the mean fish weight in the catches

## ICCAT CICTA CICAA 50

## Indices of abundance (CPUE)

- No overall trend over time on the available standardized indices of abundance (CPUE series)
- No index of abundance available for the major fishery (Italy)
- CPUE series did not cover the earlier years of the reported landings

## ICCAT CICTA CICAA 50

## Stock assessment in 2016

Age structured model (XSA) 3 different F scenarios:

- Continuity (similar to 2014 assessment);
- Assuming discard misreporting;
- Natural mortality (M) varying with age
- Recruitment (Rec) declines in the last decade
- Spawning Stock Biomass (SSB) stable at low levels (about $1 / 3$ of that in the mid 1980s), is less $15 \%$ of $\mathrm{B}_{\text {MSY }}$
- Declining fishing mortality (F) in the last decade, $\mathrm{F}_{2015}$ is almost twice the estimated $\mathrm{F}_{\mathrm{MSY}}$

## Stock status in 2016

## 100\% probability that the stock is overfished and subject to overfishing

## ICCAT CICTA CICAA $5 \bigcirc$

## Projections

## Three F scenarios:

- Current F (blue)
- $\mathrm{F}=0.8 * \mathrm{~F}_{\text {Cur }}$ (red)
- $\mathrm{F}=\mathrm{F}_{\text {MSY }}$ (green)

## Projections

Kobe II Strategy matrix showing probabilities (\%) of being in the green quadrant by year for each level of fishing mortality. $\mathrm{F}_{\text {Cur }}$ refers to the current F (2015)

| $\boldsymbol{F}$ multiplier |  | $\boldsymbol{F} / \boldsymbol{F}_{\text {cur }}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ | $\mathbf{2 0 2 3}$ | $\mathbf{2 0 2 4}$ | $\mathbf{2 0 2 5}$ |
| ---: | :--- | ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | $\mathrm{~F}_{\text {MSY }}$ | 0 | 0 | 0 | 0 | 0 | 100 | 100 | 100 | 100 | 100 | 100 |

| 0.8 | $\mathrm{~F}_{\text {Cur }}$ | 0.8 | 8826 | 9939 | 11786 | 13204 | 14464 | 15287 | 16465 | 17206 | 17746 | 17711 |

## Synthesis

## High uncertainty on future recruitment levels makes projections and stock status estimates questionable:

- If recruitment can return to the 1980 s and 1990 s levels, then the stock is severely overfished and will require long recovery times before it reaches $\mathrm{B}_{\text {MSY }}$ (basic scenario assumed in projections).
- If the recruitment tendency is an artefact of the estimation process (e.g. underestimation due to discarding), then current recruitment may be underestimated. The stock could recover faster than in case above, if undersized fish mortality is reduced
- If recruitment has changed because of a regime shift or changes in ecological conditions, then current stock productivity may be lower than in the 1990s and current reference points do not represent current stock conditions

## SCRS management recommendation

- Substantial decreases in harvest rates so that responses from the population can be detected
- Increase monitoring of landings and discards
- The impact on swordfish recruits of the albacore fisheries operating during the swordfish fishery, closure needs to be taken into account

## Bluefin tuna: Background information

## Managed by International Commission for the Conservation of Atlantic Tunas (ICCAT):

- Two stocks: West and East-Med (mixing in Central North Atlantic and extensive migrations)

- Homing behaviour
- Last assessment in 2014 (projections updated in 2016)
- Management through input control measures (e.g. TAC, minimum size/weight, fisheries closures)

## Objective:

- Maintain the stocks at level which will permit maximum sustainable catch for food and other purposes

## ICCAT CICTA CICAA

## Fisheries

- Main gears: Purse-seine, taps and longlines
- Production around $16,000 \mathrm{t}$, with a estimated peak of 50,000-61,000 t between mid-1990's-2007

Geographic distribution of bluefin tuna catches per $5 \times 5$ degrees and per main gears from 2010 to 2014

## ICCAT CICTA CICAA 50

## Indices of abundance (CPUE)

## Bad news

- Increasing difficulties in updating CPUE time series linked to recent management regulations (time/area closure, individual quota/low TAC, minimum size limit)
- Spanish baitboat sold their quota to other fisheries
- Impossible to update the Spanish component of the trap index, since 2013 (Moroccan trap index used)

## Good news

- Continuity of Japanese longline index in North East Atlantic seems ensured

Japanese Longline (N_East Atl. \& E_Atl. and Med.)

Norwegian Historical Purse Seine (East Atlantic)

## ICCAT CICTA CICAA $5 \bigcirc$

## Projections

- Projections suggest E-BFT biomass would continue to increase in future
- BUT the indices for large fish declined for those years.
- Projections appear to be rather optimistic

## ICCAT CICTA CICAA $5 \bigcirc$

## Outlook

Results integrated over the 3 recruitment scenarios (low, medium and high), the 2 catch scenarios (reported and inflated) and with the estimated selectivity pattern over 2009-2011 (as in 2014)

| TAC | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 t | $77 \%$ | $84 \%$ | $91 \%$ | $96 \%$ | $98 \%$ | $100 \%$ |
| 2000 t | $76 \%$ | $84 \%$ | $91 \%$ | $96 \%$ | $98 \%$ | $100 \%$ |
| 4000 t | $76 \%$ | $84 \%$ | $91 \%$ | $95 \%$ | $98 \%$ | $99 \%$ |
| 6000 t | $76 \%$ | $83 \%$ | $90 \%$ | $95 \%$ | $98 \%$ | $99 \%$ |
| 8000 t | $76 \%$ | $83 \%$ | $90 \%$ | $94 \%$ | $97 \%$ | $99 \%$ |
| 10000 t | $76 \%$ | $83 \%$ | $90 \%$ | $94 \%$ | $97 \%$ | $99 \%$ |
| 12000 t | $76 \%$ | $83 \%$ | $89 \%$ | $94 \%$ | $97 \%$ | $99 \%$ |
| 14000 t | $76 \%$ | $82 \%$ | $89 \%$ | $93 \%$ | $97 \%$ | $98 \%$ |
| 16000 t | $76 \%$ | $82 \%$ | $89 \%$ | $93 \%$ | $96 \%$ | $98 \%$ |
| 18000 t | $76 \%$ | $82 \%$ | $88 \%$ | $93 \%$ | $96 \%$ | $98 \%$ |
| $\mathbf{1 9 2 9 6}$ t | $\mathbf{7 6 \%}$ | $\mathbf{8 2 \%}$ | $\mathbf{8 8 \%}$ | $93 \%$ | $96 \%$ | $98 \%$ |
| 20000 t | $76 \%$ | $82 \%$ | $88 \%$ | $92 \%$ | $95 \%$ | $98 \%$ |
| 22000 t | $76 \%$ | $81 \%$ | $87 \%$ | $92 \%$ | $95 \%$ | $97 \%$ |
| 24000 t | $76 \%$ | $81 \%$ | $87 \%$ | $92 \%$ | $95 \%$ | $97 \%$ |
| 26000 t | $75 \%$ | $81 \%$ | $87 \%$ | $91 \%$ | $94 \%$ | $97 \%$ |
| 28000 t | $75 \%$ | $81 \%$ | $86 \%$ | $90 \%$ | $94 \%$ | $96 \%$ |
| 30000 t | $75 \%$ | $81 \%$ | $86 \%$ | $90 \%$ | $93 \%$ | $96 \%$ |

According to the 2016 updated projections and above specifications, East-Mediterranean stock would be neither overfished nor under overfishing with 60\% of probabilities by 2022

## Thanks for your attention
